**Attachments:** EPA Cmt - Revisions to App E, Section F.2\_updated.docx

Hi Jason,

Per our conversation this morning, attached is my updated comment for the FWER values in Appendix E, Section F.2. The information on pages 3-4 (under the "determination of" FWER<sub>t</sub> and FWER<sub>d</sub> headings) is the new information I added in yesterday. (My earlier email on this topic is forwarded below, FYI).

Thanks!!  
Melinda

Hi Jason,

Included in the attachment above is my comment related to the need to revise the FWER values for AES Shady Point in Appendix E (Section F.2) of the OK WQS. The attachment also includes additional background and rationale supporting my comment. I would consider these suggested revisions to be non-substantive in nature (since we already approved the site-specific criteria that reflect the revised FWER values back in 2002), but useful for transparency and clarification purposes.

In terms of typo-related revisions, I didn't spend time to thoroughly review the OK WQS to look for typos, but just looked to see if I'd already previously noted anything in my desk-copy of the standards. The only thing I noted was at OAC 785:45-5-12(f)(6)(G) (see excerpt below). I think "designed" should be "designated" (see yellow-highlight below).

(G) The acute and chronic numerical criteria listed in the "Fish and Wildlife Propagation" column in Table 2 of Appendix G of this Chapter apply to all waters of the state **designed** with any of the beneficial use sub-categories of

Fish and Wildlife Propagation. The numerical criteria which prohibit acute toxicity apply outside the acute regulatory mixing zone.

Thanks so much!  
Melinda
